# **Greenfield Primary School**

## **Science Curriculum**

At Greenfield, we aim to ensure that all children are given a broad and balanced Science curriculum which enables them to develop their understanding of the world around us. Additionally, we want all children to love Science and to be curious and inquisitive as they go through their lives. Our Science curriculum opens children's eyes to a world of opportunities and the potential to pursue careers such as: astronauts, forensic scientists, palaeontologists and environmental consultants.

To achieve this, we provide foundations for understanding through Biology, Chemistry and Physics knowledge, which has been coherently planned and sequenced, to ensure that all children can access and extend their scientific learning. Furthermore, we plan immersive and engaging practical activities and experiences into our learning sequences, to develop their curiosity and questioning while promoting a love of learning.

### Implementation

All of our Science topics are taught within each year group in accordance with their place in the National Curriculum and Early Years Framework.

- Topics are taught as a blocked unit to allow children to focus on one specific area. By studying each topic in depth, children are better able to develop their knowledge and skills.
- Some topics are built on throughout the years, such as living things and their habitats. This allows children to develop a depth of understanding and progression of key skills.
- Some topics are stand alone and specific to given year groups. Knowledge is revisited in these
  areas through cross-curricular learning, such as Year 4 Everyday Materials links to Year 5 Rivers
  through knowledge of water cycles.

## **Curriculum Overview**

#### Foundation Stage

Understanding the World:

Early Learning Goals: The Natural World

- Explore the natural world around them, making observations and drawing pictures of animals and plants.
- Know some similarities and differences between the natural world around them and contrasting environments, drawing on their experiences and what has been read in class.
- Understand some important processes and changes in the natural world around them, including the seasons and changing states of matter.

Year One					
Plants		Everyday Materials	Animals including	Seasonal Changes	
			Humans		
Objectives:	Identify and name a variety of common wild and garden plants. Including: deciduous and evergreen trees. Identify and describe the basic structure of a variety of common flowering plants, including trees.	Distinguish between an object and the material from which it is made. Identify and name a variety of everyday materials, including wood, plastic, glass, metal, water and rock. Describe the simple physical properties of everyday materials. Compare and group together a variety of everyday materials on the basis of their simple physical properties.	Identify and name a variety of common animals, including fish, amphibians, reptiles, birds and mammals. Identify and name a variety of common animals that are carnivores, herbivores and omnivores. Describe and compare the structure of a variety of common animals. Identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense.	Observe changes across the four seasons. Observe and describe weather associated with the seasons and how day length varies.	

PlantsUses of Everyday MaterialsAnimals including humansLiving Things and their HabitatsObserve and describe how seeds and bulbs grow into mature plants.Identify and compare the suitability of a variety of everyday materials, including plants.Notice that animals, including humans, have offspring which grow into adults.Explore and compare the differences between things that are living, dead, and things that have never been alive.Find out and describe how plants need water, light and a suitable temperature to grow and stay healthy.Motice that compare the suitability of a variety of everyday materials, including plastic, glass, brick, rock, paper and cardboard for particular uses.Notice that animals, including humans, for survival (water, food and air).Explore and compare the different spreading that are living, dead, and things that have never been alive.Find out and describe how plants and a suitable temperature to grow and stay healthy.Find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching.Notice that animals, including humans, for survival (water, food and air).Living Things and their HabitatsDescribe the importance for humans of exercise, eating their fabitats, including microhabitats.Living Things and how they depend on each other.Go find, and hygiene.Stretching.Find out and and other animals, using the idea of a simple food chain, and identify and name different sources of food.		Year Two

Identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other. Identify and name a variety of plants and animals in their habitats, including microhabitats. Describe how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify			

~

			Year Three		
	Plants	Rocks	Animals including humans	Forces and Magnets	Light
Objectives:	Identify and describe the functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers. Explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant. Investigate the way in which water is transported within plants. Explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal.	Compare and group together different kinds of rocks on the basis of their appearance and simple physical properties. Describe in simple terms how fossils are formed when things that have lived are trapped within rock. Recognise that soils are made from rocks and organic matter.	Identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat. Identify that humans and some other animals have skeletons and muscles for support, protection and movement.	Compare how things move on different surfaces. Notice that some forces need contact between 2 objects, but magnetic forces can act at a distance. Observe how magnets attract or repel each other and attract some materials and not others. Compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials. Describe magnets as having 2 poles. Predict whether 2 magnets will attract or repel each other, depending on which poles are facing.	Recognise that they need light in order to see things and that dark is the absence of light. Notice that light is reflected from surfaces. Recognise that light from the sun can be dangerous and that there are ways to protect their eyes. Recognise that shadows are formed when the light from a light source is blocked by an opaque object. Find patterns in the way that the size of shadows change.

			Year Four		
	Sound	Electricity	States of Matter	Animals	Living Things and
				including humans	Their Habitats
Objectives:	Identify how sounds are made, associating some of them with something vibrating. Recognise that vibrations from sounds travel through a medium to the ear. Find patterns between the pitch of a sound and features of the object that produced it. Find patterns between the volume of a sound and the strength of the vibrations that produced it. Recognise that sounds get fainter as the distance from the sound source increases.	Identify common appliances that run on electricity. Construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers. Identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery. Recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit. Recognise some conductors and insulators, and associate metals with being good conductors.	Compare and group materials together, according to whether they are solids, liquids or gases. Observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius (°C). Identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature.	Describe the simple functions of the basic parts of the digestive system in humans. Identify the different types of teeth in humans and their simple functions. Construct and interpret a variety of food chains, identifying producers, predators and prey.	Recognise that living things can be grouped in a variety of ways. Explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment. Recognise that environments can change and that this can sometimes pose dangers to living things.

	Year Five

		Year Six		
Light	Electricity	Animals including humans	Living Things and Their Habitats	Evolution and Inheritance
OperiodRecognise that light appears to travel in straight lines.Use the idea that light travels in straight lines to explain that objects are seen because they give out or 	number and voltage of cells used in the circuit. Compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches. Use recognised symbols when representing a simple circuit in a diagram.	Identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood. Recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function. Describe the ways in which nutrients and water are transported within animals, including humans.	Describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including micro- organisms, plants and animals. Give reasons for classifying plants and animals based on specific characteristics.	Recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago. Recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents. Identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution.

- Through planning and delivery of science lessons, teachers promote enjoyment and foster interest in the three scientific disciplines: biology, chemistry and physics.
- Our planning proforma enables teachers to identify areas of relevant prior and future knowledge that children have/need, to inform their sequence of learning.
- Additionally, teachers are able to identify and prepare for possible areas of misconception. During lessons, teachers use effective assessment for learning strategies to ensure misconceptions are highlighted and addressed.
- Through a range of teaching strategies, planning is effectively differentiated to ensure that it is
  accessible to all learners. Teachers facilitate opportunities for each child to develop the same
  level of knowledge and understanding.
- At the start of each topic, children complete a Pre-Topic Assessment which reviews previous learning. It also provides the opportunity for children to share what they already know and consolidate that understanding. In EYFS and Year 1, Pre-Topic is completed verbally to allow children to fully access their understanding.

 To support children in the acquisition of knowledge throughout a topic, knowledge organisers are provided which include key concepts, vocabulary and diagrams. These are used a tool throughout the topic to support the learning.

- Throughout topics, children will revisit and build their knowledge with the intent of answering a 'big question' upon topic completion. These big questions link to overarching concepts which are weaved throughout the whole school science curriculum map. Thus, enabling children to continue their journey exploring areas of science and revisiting previously taught knowledge.
- Big questions are answered in a variety of ways including: debates, posters, written responses and presentations. Children are informed of their big question at the start of each topic and enjoy building up to answering it.

## Early Years Foundation Stage (EYFS)

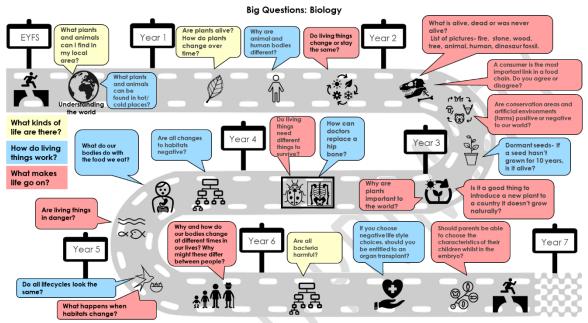

• The EYFS curriculum supports children's understanding of Science through the planning and teaching of 'Understanding the World'. Through their learning, children find out about objects, materials and living things. They are able to use their senses and identify similarities, differences, patterns and changes. Both the learning environment and skilled practitioners foster curiosity and encourage explorative play. Children are motived to ask questions about why things happen and how things work. Our children are encouraged to explore their natural environment. Children enjoy spending time outdoors and observing the changing seasons, plants and animals. Children regularly participate in structured scientific activities such as cookery and baking sessions, as well as daily open ended discovery through sand, water, block and magnet play.

## **Big Question Road Maps**

## Biology

### **Overarching Concepts:**

- What kinds of life are there?
- How do livings things work?
- What makes life go on?

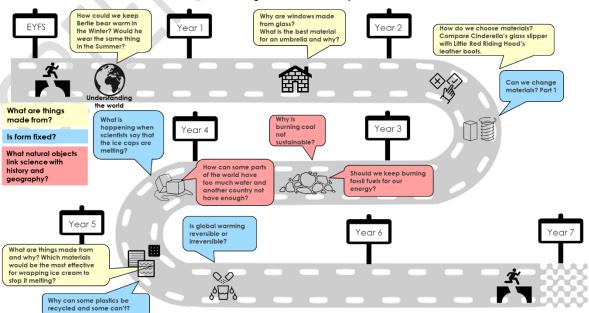

Chemistry

### **Overarching Concepts:**

- What are things made from?
- Is form fixed?
- What natural objects link science with history and geography?

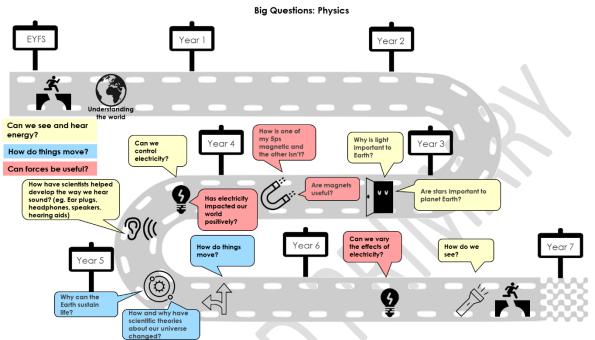

Big Questions: Chemistry

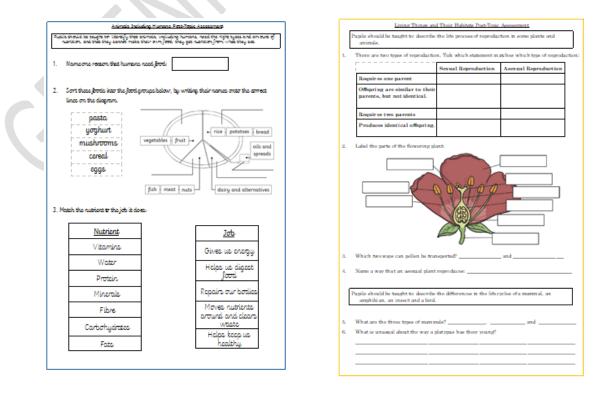

## **Physics**

### **Overarching Concepts:**

- Can we see and hear energy?
- How do things move?
- Can forces be useful?

 At the end of a topic, children will complete a Post-Topic Assessment which will evaluate how much of the topic the children have retained and understood. Teachers can use this to inform personal reflections and future planning of the topic. In Year 1, children complete an 'I have learnt' statement to assess their understanding and level of scientific vocabulary.

#### Examples of sections from Post-Topic Assessments from Key Stage 2.

- Within planning, opportunities for cross-curricular learning is planned for and each topic has been designated a fictional or non-fiction text which can support the learning.
- To enrich the curriculum, children are able to take part in educational visits and visitors are planned for in school workshops and immerse experiences. *Example: Year 5 take part in the Black Hole Planetarium experience and EYFS/KS1 experience hatching and caring for live chicks.* These wider opportunities enhance the pupils' experiences within the Science curriculum and understanding of how their learning links to the wider world.
- In each classroom, children have a Science working wall which they can refer to, to recall knowledge, identify key vocabulary and 'park' questions throughout the topic. Teachers regularly update their displays to be relevant.
- Each year, science is further promoted across the school during British Science Week. All children experience hands-on science activities that links to the relevant theme. This allows our scientific learning to be embedded in their knowledge of the wider world.
- Throughout the school, Science is celebrated through whole school displays, achievement assemblies and in class 'scientist of the week'. This encourages children to actively participate in their learning and provides purpose.

### Impact

The impact of our curriculum design should lead to good progress, for all children, across the key stages. Our sequence of learning provides opportunities for knowledge to be revisited and consolidated. Therefore, we expect children to leave school reaching the age related expectations for Science. Through our practical activities and experiences, external trips and various workshops, children will be enthusiastic and passionate Science learners. They will have an understanding that Science is vital to our lives and the world's future and be empowered to make a difference themselves. Our children's love of Science is evident through their pupil voice, their high-quality work and an overwhelming sense of enjoyment.
